- **Diploma** Sandeep Institute Of Polytechnic (62.24 %)

Experience With Projects:

Software Developer |Bajaj Life, PUNE| MAY-2023 - FEB-2026

Project: Need Analysis – Life Insurance BI Generation System

Need Analysis is a life insurance quotation (BI) generation system integrated with a third-party application and internal Bajaj Allianz infrastructure.

Key Responsibilities:

- Designed and developed a REST API for BI generation used by internal applications (Bajaj websites) and external partners (e.g., PolicyBazaar, Bandhan bank).
- Designed a simplified API interface for partners, while internally converting requests into complex third-party BI API formats.
- Handled third-party API version changes and newly added mandatory parameters centrally, so partner applications did not need to make changes.
- Implemented default parameter handling and backward compatibility for multiple BI versions.

- Developed a Data Saving API to receive BI generation details from the third-party system and store them in the company database for tracking and further case processing.

Personal Information

- Sex & Marital Status : Male & Unmarried o DOB : 10 June 1997.
- Nationality : India
